The Quality and reliability of AusRAMD Engineering services and products are paramount to the success and growth of our business.

Our Top Management is therefore committed to demonstrating leadership and commitment with respect to our quality management system and shall take accountability for the effectiveness of the system, in ensuring applicable requirements are met.

However, quality must continue to be the concern of every person in the Company, not just the sole responsibility of Top Management. Every person in the Company has quality related responsibilities, and it must be accepted and understood that every aspect of what we do in the business ultimately affects the level of client satisfaction.

The Company is committed to establishing quality objectives at relevant functions, levels and processes needed for the quality management system. All quality objectives shall be appropriate, measurable and continuously reviewed and updated to ensure product conformity and enhanced customer satisfaction.

Our Quality Management System is designed to ensure that we consistently provide services and products that meet customer and applicable statutory and regulatory requirements and aims to enhance customer satisfaction through the effective application of the system.

The Quality Management System that the Company has established is in accordance and compliance with the standard ISO9001:2015. The systems, processes and methods employed within the system are to be kept under continual review and improvement.

These principles are the AusRAMD Engineering guide and all employees are expected to embrace and support them as a team and to actively pursue the requirements of the Quality Management System in order to meet and exceed the expectations of our clients.
